

**There are also many types of “Building Trades” service offered by 24HR commercial appliance services Our building work’s covers :**

- Molding Service Engineer
- 24Hr Bursting pipe repair Engineers ,
- Molding engineers
- complete molding services
- Emergency direction drilling
- Emergency directional drilling
- Directional drilling pipe
- Directional drilling technology
- Drilling services
- Horizontal drilling services

- Horizontal directional drilling
- Impact mole engineers
- 24 Hours impact moling repair
- Laying drainage pipes
- Mole claw trap
- Mole holes
- Mole plough
- Emergency moleing Spcialist
- Moling contractor
- Moling services
- Eemrgency pipe bursting repairs
- 24HR pipe drains

- New plumbing pipe installation
- Pipe line services
- Pipe maintenance
- Pipe moling engineer
- Underground Moling Services

### **Our Underground Moling Services**

We offer underground Moiling Services with trenchless technology and our moiling specialists are reliable and can do quality work done for you.

Using a variety of techniques including horizontal directional drilling, impact moling and pipe bursting, Our Moiling Service Specialists are able to lay your pipes, cables and conduits with minimal disruption to your site and the environment.

How often do you find that pipe replacement and upsizing aren't as straightforward and is this a headache to you, time wasted to try to deal with the matter?

**Existing pipes may be buried deep in the ground making traditional trenching expensive and time-consuming. Excavations along busy highways are difficult to manage and meeting demanding reinstatement criteria can add considerably to costs. You may be operating in an area where different utilities are crowded together creating access problems. The pipeline may pass through a brownfield site, or under a building; it may be a site where the visual impact of works needs to be minimised. In all of these cases, pipe bursting is an alternative well worth considering.**

Our Moiling Specialists use pipe bursting technology to install new polyethylene pipes along the route of existing gas, water or sewer pipelines. It is often assumed you can only burst cast and ductile iron pipes, but pipe bursting can also be used on clay, concrete, steel, cement and PVC pipes.

Faster than traditional cut and lay, pipe bursting is a trenchless or 'no-dig' technique which can be implemented with minimal disruption to traffic, commerce and the environment.

With pipe bursting, excavation is limited to a launch and a reception pit. Once the existing pipe has been isolated – i.e. it is no longer active – steel rods are inserted along the pipe from the launch pit. When the rod reaches the reception pit, a cutting head and expansion device are fitted and the new polyethylene pipe attached. The rods are then pulled back towards the launch pit and the existing pipe is 'burst' and displaced into the soil allowing the new pipe to be pulled through.

Pipe bursting is not limited to simply replacing the existing pipe with one of the same bore size, it is regularly used to install a larger pipe than the old one thereby increasing the capacity of the system.
