

Hamworthy Heating's new Fleet range of condensing boilers, promises to change the way the industry views commercial boiler solutions.

British designed and built at the Hamworthy factory in Poole, the new Fleet brand comprises an exceptionally versatile range of modular boilers suitable for a multitude of commercial plant rooms.

Hamworthy Commerical boiler has taken an innovative approach to offer Fleet condensing boilers in wall hung and floor standing configurations, with outputs from 40kW to 1050kW. Using common components and exploiting its expertise in floor standing modular boiler design, Hamworthy has produced ultra-compact modules for both horizontal and vertical boiler applications.

At the heart of the Fleet is Hamworthy's new sectional heat exchanger, which has been designed for use in all the wall hung and floor standing boilers, allowing each product to be easily configured with a total of 47 different models.

The new Fleet range reflects our commitment to advancing the technical excellence of our products in the best interests of our customers, and address market needs that have been carefully identified. Through our innovative heat exchanger and a rigorous attention to detail, the Fleet range will feature a very competitive market price, which will enable customers to purchase Hamworthy's quality engineered premium products at an affordable price.

Manufactured using robust aluminium alloy castings for high efficiency condensing performance, the Fleet range of boilers are suitable for up to 6 bar working pressure. Engineered to the Hamworthy pedigree, the Fleet boilers have been through a comprehensive testing and development programme. Hamworthy's heat exchanger comes with a 5 year warranty, backed up by the manufacturer's dedicated after-sales service.

Emergency Commercial & Domestic Wood Burning Stoves repair, maintenance and installation

Care is essential for stoves to enhance safety and efficiency. For a start, consult an expert in repair. It is always advisable to use a brush or a vacuum cleaner to carry out soot accumulated in the stove. All ash is removed and grate as well as the glass window which can be handled using special cleaners. Some of the areas that one can pay attention are the carrion in metal parts which may become loose. Presence of holes can also cause leakage. Flexibility of the vents and doors can also be confirmed as well. Cracking and warping is also another possible area for attention. These areas should be checked to ensure any problem is rectified.

Precautions

Look out for firebricks, fibre cord for fastening doors and windows and heat seal for sealing joints as the main areas for attention. Apply grease to parts that are moving. For corroded areas, wash with grease and then apply spray to avoid corrosion again. Repairing the stove early enough is an effective strategy since it becomes ready for use. Good weather can also allow exterior work on the stove. The vent should also have circulation such that air enters into it. In summary, one needs to have several materials in mind when carrying out repairs. These are sprays, polish cords, cement, fire cleaner and brick stone.
