

Locating and Repairing the Leak – Emergency Molding – 24HR Commercial Pipe Moiler

Using specialist equipment and many years experience, our skilled engineers can pinpoint quickly the position of a water leak. The defective pipe may then be excavated out and repaired or replaced, depending on your preference. Our first priority is to leave your property as we found it:

-Our engineers aim to make repairs using a trenchless method (impact molding) that minimises surface disruption

-Excavations are carefully reinstated to the highest standards

We provide a cost effective alternative to traditional open cut methods of installation, renewal and repair. Our services can also help you to reduce the impact on the environment.

The advantages of impact molding for your company are:

•██████████ Installations of water mains, ducts, cables and underground services

•██████████ More cost effective than traditional trenching methods

•██████████ Minimal / no excavation beyond necessary launch pits or termination points for the installed service

- **Minimal disruption to the customer's property**

- **Environmentally and socially beneficial**

Installation times vary dependent on soil conditions. Typical bore sizes are in the range of 30 - 180mm diameter.

We handle all aspects of the excavation side of your business, minimising the additional cost and effort for you and leaving you free to concentrate on the job in hand.

Impact Moling How It Works

Impact Moling is a technique in which a pneumatic piercing tool is used to create a bore hole. The ground is compacted and displaced rather than excavated and removed, therefore disruption and reinstatement are minimal.

Impact moling is the simplest and least expensive trenchless technology installation method.

What is moling?

In the construction industry, moling is a trenchless method used to lay pipes. During the moling process, a pneumatically-driven machine known as a mole forces its way through the soil along the desired path of the pipe. Moling avoids the need to dig a trench and

can be used to lay water pipes and the heating coils of heat pump systems

Trenchless technology, as the name implies, stands for subsurface construction works where less trenches or no continuous trenches are required to be dug. It is a rapidly growing sector of the construction and civil engineering industry.

It can be defined as "A family of methods, materials, and equipment capable of being used for the installation of new or replacement or rehabilitation of existing underground infrastructure with minimal disruption to surface traffic, business, and other activities."

Examples of Emergency Moling Services / 24 HR Moiler

- External Drain Jetting Service to clear bad blockages
water pipe repair - Underground

- Lead pipe replacement
water pipe repair - Emergency

- Commercial pipe water leak
leaking pipes - Emergency

- Emergency commercial leaking pipe
leak detection services - Commercial

- Emergency moling engineer leak detection lead pipe repair plumber - Emergency
- Emergency leaking pipe repair pipe repairs - 24HR water
- Leak detectors, Water leak repair water pipe replacement - Underground
- Underground water pipe moling engineer pipe - Leaking water
- Water pipe detection domestic plumbing pipes replacement experts - Commercial and
- Emergency leak detection specialists pipe - Repair leaking
- Water pipe replacement, leak repair leak detection systems - Plumbing repair,
- Drain pipe repairs, pipe leak detection specialist Emergency Moling engineer - 24/7
- Replacement of water main pipes supply and main pipes - Repairs of water

- Underground pipe work, Pipe Duct Installation
detection and pipe tracing

- Leakage
