

If regular cleaning is not undertaken then greasy deposits left in the ductwork will attract fibrous build-ups as time progresses, will become baked on, making removal extremely difficult and time consuming. Air flow efficiency can be seriously impaired by deposits, leading to a greater use of energy.

All areas which if not regularly, professionally, cleaned and maintained can quickly become a fire risk. Bacteria developing in grease deposits create a hazard to health. Business efficiency and profitability are also bound to suffer.

Neglect of grease extractors results in the accumulation of fats, oily deposits and fibrous particles in the system, the major cause of the spread of fire in catering establishments. The warm greasy environment is an ideal breeding ground for bacteria and cockroaches.

Failure to ensure regular cleaning of kitchen grease extract systems can invalidate buildings insurance cover. We are aware of many cases where insurers are refusing to pay out on millions of pound worth of claims following fires where the insured has not complied with the warranties on their buildings insurance policies regarding regular cleaning of the grease extract systems. Advanced Professional Catering Services can provide service contracts and any type of ducting services for your peace of mind.

Commercial Extraction System ensures that kitchen grease extract systems (canopies, filters, ductwork, risers and fans) in kitchens, restaurants, hotels, pubs, canteens, food production areas, hospitals, schools and the like are cleaned as required by your buildings insurance policies, in accordance with Fire Safety Regulations and Workplace (Health, Safety & Welfare) regulations.

**Well designed extract system ensures clean air in your working environment which is an essential element for:**

- Reducing health risks

- Reducing the risk of fire
- Improving internal working environment
- Preventing Odours
- Improves general hygiene
