

At 24HR Commercial Appliance Services. Our engineers are specialists in installing and repairing gas interlock & gas proving systems, for all your commercial extraction & ventilation needs contact We supply and fit gas interlock system to commercial kitchen such as Take-aways , Offices, Restaurants, Hotels , Pubs, Colleges, Universities, Guest Houses, Nursing Homes, Clinics, Schools , Childrens Nurseries, Wedding Halls, Wedding Halls, Churches, Temples and other commercial catering places and many other commercial properties. We also can install commercial gas lines, canopy for your commercial kitchens. All work carried out by our team of fully qualified commercial gas engineers

Registered Commercial Canopy Installers Engineers

Commercial kitchen canopies provide hygienic and decorative approach to achieve a fresh and clean commercial kitchen environment.

Ventilation in a commercial kitchen is very important to maintain a healthy surrounding, not only from comfort aspect but from health and safety as well. It will eliminate the dangerous carbon monoxide gases from the gas cooking equipment and steam generated from boiling, creating fresh and dirt-free air in the workplace.

Commercial Canopy Installation

Commercial kitchen canopies provide hygienic and decorative approach to achieve a fresh and clean commercial kitchen environment.

Ventilation in a commercial kitchen is very important to maintain a healthy surrounding, not only from comfort aspect but from health and safety as well. It will eliminate the dangerous carbon monoxide gases from the gas cooking equipment and steam generated from boiling, creating fresh and dirt-free air in the workplace.

Commercial Kitchen Canopy Services

-Canopies are designed to remove harmful fumes (carbon monoxide gasses) & the removal of heat & grease generated from cooking equipment situated below.

- Regular cleaning of your extraction system is recommended. There should be suitable access to the ductwork to allow for regular cleaning preventing accumulation of fat & grease. If regular cleaning isn't monitored hidden combustion loads form. Also flames or very high temperatures within the duct can ignite any grease causing a fire.

CANOPY FILTERS

Mesh filters require regular washing & as a consequence are less reliable & can be regularly replaced.

Baffle filters are safer & are less of a fire risk because they are designed not to hold on to any fat or grease. Air is drawn through the filter forcing a change of direction & speed resulting in separation of grease into collection troughs.

GAS AIR INTERLOCKS

All extraction systems must have a gas interlocking system in place to comply with BS6176 & should be installed by a CORGI registered engineer. This prevents the gas from being turned on until ventilation is fully operational.

Interlock systems such as the Merlin CT1200S use an air pressure sensor which detects when the canopy is working correctly with sufficient air flow. Once this is achieved the gas solenoid valve will open from a closed position
