Commercial Gas Pipe Tightness Testing

Tightness testing is carried out to ensure that your gas pipework is safe for use. In a new gas pipework installation the test is to verify that pipework is gas tight.

On existing gas pipework installations, the test is to confirm that the pipework is gas tight.

A smell of gas or presence of gas detected would fail the test and would be required to be traced and repaired which ABC can also attend to.

We recommend that all gas pipework be tested on an annual basis. This can be carried out at the same time as the annual gas appliance service visit.

We also undertake all other gas services including new installations of central heating systems, planned preventative maintenance and also repairs of boilers, both domestic and commercial.

Whenever gas pipework is repaired, extended or newly installed a purge must be conducted.

We are experts in the commissioning and decommissioning of commercial gas pipework.

24HR Commercial Appliance Services have a large project portfolio for commercial gas pipework low pressure purging on both large and small systems. We provide purging services for both new build, recommissioning or decommissioning projects.
